Innovative Business Solutions—35 Years Running
Carolina Loves walking and reading. Owner of Tapla Industries in Spain.

“With abas, we improved the overall management of the company by obtaining key data that is essential for effective strategic planning.”

THE BUSINESS SOFTWARE OF (HIDDEN) CHAMPIONS

abas is the global partner for champions. But not every champion is a household name. Many of our customers are hidden champions—midsize companies that are global leaders in their market segment. Their secret? People.

Today’s markets are driven by a fast pace and the ability to quickly adapt to evolving conditions. Modern, competitive business leadership is not possible without cutting-edge ERP software. But technology and innovation alone are not enough. It’s the people who get things done who determine success.

At abas, we provide our customers high-performance software that enables them to adapt processes without disrupting daily operations; a system that is designed for growth and agility, yet robust and easy to maintain. But it is the expertise and passion of our team that define us. With 35 years of experience and unmatched dedication, it’s no wonder why 93% of our customers stay with abas. In our field, we are the hidden champion.

WE ARE ABAS.
Knowledge is critical to the success of an ERP project. That’s why it is essential to have an experienced partner at your side—someone who knows the challenges of your industry and understands your requirements. abas ERP projects are backed by the entire abas partner network and their collective experience from over 3,300 ERP projects. With 35 years of experience in a wide range of industries, and the best practice knowledge that comes with that experience, abas understands the specific requirements of your industry and the solutions you need.
01
FOUNDATION: OUR TECHNOLOGY PLATFORM
It all starts in Karlsruhe, located at the heart of Germany’s technology region. That’s where we develop the abas technology platform on which every abas ERP installation is built. The system architecture, our unique database, and the abas Essentials—the core ERP functions—are created here. The applications run by more than a hundred thousand users in over 30 countries each day are all based on this same technology platform. At abas, we place great value on owning the majority of the technology stack and the benefits that it provides our customers.

02
ABAS ERP: STANDARD SOFTWARE FOR YOUR MARKET
Even the most comprehensive business software doesn’t help your organization if it wasn’t designed with the specific requirements of your industry in mind. The same is true for regional or country-specific differences: Varying regulatory and tax law requirements must be built into the software—simply translating the interface is not enough. So where does the necessary expertise come from? From the specialists on site. abas relies on the industry and ERP expertise of our specialists at locations in 29 countries. This localized knowledge is the key to creating software that strengthens your ability to compete in your specific market.

03
CUSTOMIZATION: YOUR TAILORED SOLUTION
Every business is different. For many organizations, their unique way of doing things is what sets them apart from the competition. Your ERP software must be flexible enough to match. This is where our software—developed with the Best Practices attained from over 3,300 projects—comes together with your specific expectations and process requirements. Fusing known Best Practices with our technology is a significant part of our implementation strategy because it results in optimization of your business processes. But what’s most important: No matter how much abas ERP is modified to meet your requirements, the software remains upgrade-compatible and easy to expand.
“IT’S CLEAR THE PEOPLE AT ABAS KNOW THEIR PRODUCTS WELL AND WILL OFFER US THE SUPPORT WE NEED, WHEN WE NEED IT.”

Tammie

Outdoor enthusiast. Enjoys hiking and camping. Master scheduler at Harbor Industries.

WHY OUR CUSTOMERS CHOSE ABAS ERP*

Let’s be honest: You’ve heard it all before. Every ERP provider you evaluate presents the same arguments. They all have the most advanced technology, are highly flexible, and are proud to tell you about their exceptional customer satisfaction. But when you choose to purchase a system, do you know what—statistically—will be the deciding factor? The people. Or more exactly, your instinct: Who do you trust the most? Who understands your specific business processes and can improve them in such a way that your business gains a competitive edge?

Our customers trust abas to support their team and help their business grow. But beyond that, there are a number of other significant reasons why successful mid-market companies choose abas ERP. Here is a short collection of the reasons our customers cite for choosing abas.

Source: Annual User Survey conducted by abas Software AG, 2014–2015
Many mid-market businesses still place greater emphasis on the acquisition costs for new IT systems than they do on the operating costs. What many of them discover too late is that it should be the other way around when choosing business software. That’s why 48% of our customers chose to compare the operating costs of abas ERP over a 3–5 year period with those of other solutions before making their decision. They were impressed with what they found: Low dependency on external consultants, extreme flexibility to adapt existing processes, and upgrades and release changes without lost productivity all keep operating costs to a minimum.

Organizations that choose a new ERP solution aren’t so much looking to purchase software as they are trying to optimize business processes. Achieving this goal requires easy-to-use applications and comprehensible workflows. For 64% of our customers that was a reason to choose abas ERP. Intuitive interfaces, easy-to-understand symbols and icons, and numerous customization options empower users and streamline workflows. Try it yourself!

Sure, we’re not as big as some of our competitors. That’s why we’ve specialized in the industries and markets we know best. Among our mid-market customers, often with 50–2,000 employees, 63% say that our product portfolio was a deciding factor in their selection. In addition to core ERP functions, mobile apps, and planning tools, we offer a wide range of industry specific solutions from certified partners.

This is where the rubber meets the road: According to a current study by IDC, 15% of ERP projects fail because adapting the system to changing business processes is too tedious and expensive. These changes can include new business models, regulatory requirements, or even expansion to new locations. This is where abas ERP excels. It’s also why 74% of our customers chose abas ERP—its unbeatable flexibility.
ABAS ERP PRODUCT PORTFOLIO

**SALES MANAGEMENT & CUSTOMER RELATIONSHIP MANAGEMENT**

abas helps you stay on top of your sales tasks—from quotations, forecasting, and sales order processing to sales order controlling and early warning systems. We understand sales management is essential for sales-driven organizations that require a comprehensive overview of all customer relationships at all times. That’s why even subsequent interactions that affect your customer relations are visible in sales. Take control of your customer relationships and free up time to focus on what really counts in sales—selling.

**Functions:**
- Sales Management, CRM, Forecasting, Quotation Management, Mobile Sales, Costing, Document Management

**PURCHASING MANAGEMENT**

Purchasing is more than just sending out orders. Requirements must be planned to ensure deadlines and budgets are met. abas replaces manual requirements planning and actively helps your purchasing department make decisions that can lead to better conditions, strategic vendor selections, and on-time deliveries—especially when you’re on a tight schedule.

**Functions:**
- Requisitions, Purchasing Management, SRM, Document Management, Mobile Purchase

**MATERIALS MANAGEMENT**

abas delivers high-performance requirements planning for businesses with demanding logistical processes. abas’s materials management is a just-in-time material requirements planning with foresight that tracks all requirements from sales, purchasing, warehousing and production to ensure required materials get to where they’re needed. Warehousing, picking lists, and stocktaking are all under your control—without binding you to specific operation or end devices, which can be determined by your use case.

**Functions:**
- Inventory Management, Warehousing, Scheduling, Sales, Purchasing, Production, Mobile Warehouse

**ADVANCED PLANNING & SCHEDULING**

Take control of your entire production process. With abas you can even react in real time to fast-moving changes in production processes or adjustments to individual components during the production safely and easily using the production control center. Do you require high-precision production planning? abas delivers with an APS solution that helps ensure your organization meets critical deadlines.

**Functions:**
- Advanced Planning and Scheduling/APS, Material Requirements Planning/MRP

**PRODUCTION, PLANNING & CONTROL**

Production, planning & control provides important information about the status of your production processes. Thanks to the platform independence of the application, operation and end devices can be determined by your unique scenarios.

**Functions:**
- Production Management, Work Order Management, Job Time, Mobile PDC/PTR

**SERVICE PROCESSING**

Service processing helps you stay on top of the entire lifecycle of your plants, devices and machines. Plan service assignments and maintenance schedules, as well as the supply of replacement and wear and tear parts for your customers to ensure your service team stands out from the competition. And of course you can do it all on the go.

**Functions:**
- Service Processing, Service Planner, Document Management, Mobile Service

**PROJECT MANAGEMENT**

abas Project Management provides more than just a graphical project plan—it utilizes full integration with abas ERP to provide a comprehensive control center for project-oriented businesses. Project control starts with planning and costing projects and continues through reporting and invoicing your services, coordinating project-related purchasing processes, and maintaining complete transparency all the way through to production.

**Functions:**
- Project Management, Project Cost Accounting

ABAS ERP IN ACTION
HIGHLIGHTS FOR BUSINESS MANAGERS

Your business is unique. Your strengths are what set you apart. But it’s the people who get things done that are your greatest competitive advantage. You rely on your team to meet and exceed business goals, pursue new avenues for growth, and ultimately help you achieve your vision.

In addition to empowering your team to fulfill business goals, abas helps you manage the broad range of challenges you face every day. By helping you react quickly to new developments and changing market requirements, abas enables you to maintain efficient value-added chains and optimally monitor and control your business’ performance. Real-time insight into key business indicators—from accounting to purchasing, production and sales—ensure you have the information you need to make informed decisions quickly and strengthen your organization’s ability to compete in a global market.

abas ERP provides you and your team the tools to:
• Track, analyze and improve business operations
• Optimize inventories for increased liquidity
• Comply with regulatory requirements
• Boost productivity and competitive capacity
• Gain greater insight and control over the resources that keep your business going and growing
Dashboards
Dashboards deliver a clear overview of deadlines and cost plans, and highlight critical processes.

Customer Files
Customer files provide all important information about a customer or prospect at a glance, including revenues, outstanding items and processes, tasks, notes, archived documents, service equipment, and current service activities.

Key Figures
Key figures on the status of your sales pipeline, production utilization and bottlenecks, stock coverage and turnover, and product performance deliver decision-critical insight.

ABC Analyses
ABC analyses keep you up to date on customer and product performance based on revenue or profit margins from specific customers, products or technologies.

Product Lifecycle Management
Centralize control of your product data to streamline coordination within and between your teams for a shorter time to market.

Liquidity Planning
Proactively plan financial resources to ensure liquidity and solvency.

Reporting
Reporting, including production efficiency (processing times, setup minimization, machine downtime, repair frequency and costs), purchasing efficiency (price development, batch sizes, procurement costs, vendor returns), and innovation efficiency (P+P costs vs. revenue from new products, new customers, cost savings), keep you up to date on how your business is performing.
“THE ABAS SYSTEM RUNS RELIABLY. WITH ABAS WE’RE ABLE TO STRUCTURE OUR ADMINISTRATION PROCESSES TO BE STREAMLINED THROUGHOUT THE COMPANY.”

MICHAELE

Enthusiastic reader. Chore singer. Proxy / Administration Account at ADAPT Elektronik.

ABAS ERP IN ACTION

HIGHLIGHTS FOR ACCOUNTING, PURCHASING AND SALES LEADERS

You’re not in the business of “close enough”. From accounting, budgeting and reporting to procurement, and sales initiatives, your planning and risk management need to be perfect. Only if you—and your people—have permanent access to up-to-date information can you accurately manage and deploy your business’ resources to drive growth.

abas helps you stay on top of procurement and production costs, optimize processes in purchasing and sales, and deliver accurate figures and reports to key decision makers.

abas ERP provides you and your team the tools to:

• Access essential data in real time
• Optimize purchasing and sales processes
• Track costs and analyze efficiency
• Ensure accountability and compliance
• Accurately monitor and report business assets
• Streamline group accounting
• Effectively manage risks
Costing

Preliminary, concurrent and final costing deliver exact calculations and constant comparisons of planned and actual costs at the product and customer level to ensure you know when you are on course and when you need to take action.

Procurement

Procurement tools track the status of purchasing and production activities and provide a transparent overview of cost developments (raw material prices, supplementary costs, etc.).

Finances

Stay on top of your organization’s financial resources with diverse stock inventory, itemized contribution margin calculations based on configurable dimensions, as well as accounts receivable and liquidity management.

Sales

A diverse range of instruments enable you to monitor and assess end-to-end sales processes including opportunities and outstanding quotes, your current sales backlog, critical deadlines, and revenue planning performance. Additional features help you prioritize quotes and order processing to strengthen efficiency and increase customer satisfaction.

Integrated DMS

The document management system gives you greater control over the information flood. All documents are stored centrally, providing you and your team greater transparency and quick and easy access to current data for informed decision making. The integrated DMS fulfills all requirements for tamper-free archiving—legally compliant and forgery-proof.
“WE HAVE REALIZED A MORE EFFICIENT AND TRANSPARENT METHOD FOR CONDUCTING OUR BUSINESS THROUGH THE USE OF ABAS.”

Josh

Music lover. Drummer in Rock/Metal bands. Lead Project Manager at The Beckwood Corporation

ABAS ERP IN ACTION

HIGHLIGHTS FOR PRODUCTION MANAGERS

From made-to-order to mass production—discrete or process manufacturing—supply chain and production teams are the backbone of any business. But faster, internationally networked production processes and the drive for shorter lead times put enormous strain on your planning and resources. The need to optimize processes and increase the quality of supply chains has never been greater. Only with improved control over inventories, more accurate demand forecasts, and streamlined scheduling can you keep your organization on track.

abas ERP provides you and your team the tools to:
- Schedule and meet demand requirements
- Accurately plan materials, capacities and deadlines
- Reduce lead times and inventories
- Control, evaluate and optimize production processes
Production

Whether your business specializes in discreet or process manufacturing, job production or mass production, abas ERP delivers the tools that help your team plan and manage resources, capacities and deadlines, including:

- Automatic volume or time-sensitive capacity allocations
- Production and assembly planning with a graphical console
- Multiple machine operation
- Configurable production lists for product variants
- Growing BOMs for greater transparency
- Distinction between series and prototypes with project-driven production
- No mixing of pre-series and series
- Serial numbers and lot management
- Lot-based documentation
- Product life cycle overviews
- Equipment records with life cycle BOMs and spare/wear parts lists
- Integration and planning for external production

Warehouse and Logistics

abas ERP supports your warehouse and logistics management with:

- Precise warehouse structure mapping
- Configurable reservation scenarios
- Easy reservation amendments
- Path-optimized picking
- Goods storage, withdrawal and relocation using mobile devices
- Preparatory shipping planning

Procurement

Procurements can be made to fulfill sales order, project or general stock requirements with controllable suggested values.

Sales Planning

Proven statistical, collaborative and top-down forecasting approaches help predict what you will need to have in stock and plan available resources.
“I like working with ABAS because they understand our needs and can make the system meet our requirements.”

XIAO MIN

Enjoys reading and traveling. Is also a factory project manager for TA YA Canvas in Shanghai, China.

ABAS ERP IN ACTION

HIGHLIGHTS FOR PROJECT MANAGERS

Reputation is vital to success as a professional service provider. If you want to stand out from the crowd, your organization needs the project management skills and strong personnel resources to plan and execute projects within budget and on schedule.

By bundling and visualizing all relevant data, your business can stay on top of departmental, company-wide, or even international projects to deliver what your customers expect, when they expect it, and for how much you told them it would cost.

abas ERP provides you and your team the tools to:
- Clearly map business processes in each project phase and throughout all departments
- Plan, control and monitor projects
- Efficiently assign resources
- Accurately track costs
- Meet time and budget plans
Project Information at your Fingertips

Information regarding project status, time budget, completion confirmations, and task management is accessible with the click of a button, enabling you to monitor progress, invoicing statuses, and variances, as well as forecast deadlines and budgets.

Project Preliminary Costing

Receive a preliminary cost analysis of your projects based on freely definable dimensions. The services and modules to be evaluated can be itemized using cost components. A summary provides a quick overview of the results from the contribution margin calculation.

Project Planning

Detailed project planning helps you map complex interdependencies within a project schedule at various levels. By linking ERP functions from abas with your project plan, you can monitor not only purchasing and production processes, but also service activities and subprojects.

Benefits to you:
- Plan individual or multiple project schedules
- Visualize deadlines
- Monitor project milestones
- Planning support with automatic conflict resolution, restrictions, and status-dependent releases

Project Status

A broad range of evaluation options delivers a comprehensive overview of your project’s status. The current status and any deviations are presented in a manageable view. An important feature is the overview of costs from all areas of your project, including project services, materials and production.

Automated Resource Planning for Project Team Members

The resource planner helps you quickly identify, evaluate and plan personnel and project team capacities.

Generated Project Templates including Checklists

Set up any number of project types and create templates to speed the creation of new projects.
ABAS ERP IN ACTION

HIGHLIGHTS FOR IT ADMINISTRATORS

As an IT administrator, you provide the tools that keep your company up and running. Without you, operations grind to a halt. From ensuring availability and improving business processes to securing data and leading innovation within your organization, expectations are high, and there’s no room for error. You’re responsible for a broad range of technologies and need to manage diverse software solutions and operating systems—all while coordinating with different vendors; resolving day-to-day IT issues for other team members; and controlling a flood of information that needs to be current, transparent, and available anywhere. Your best chance for success rests on reliable, easy-to-implement and easy-to-expand solutions.

abas ERP makes your job easier with:
• A reliable implementation strategy
• Intuitive, device-agnostic operation
• High availability—even during system and process changes
• An efficient and robust database
• Mobile solutions for external workforces
• Extensive integration and customization tools

“MY IMPRESSED BY HOW EASY THE SYSTEM IS TO OPERATE.”

Craig
IT/ERP coordinator at Cadman Power Equipment

Craig enjoys woodworking and golf.
Hybrid Operating Concept
The abas hybrid operating concept empowers users by providing access to relevant data from both their desktop and their preferred mobile devices. Clean operating interfaces enable a seamless transition. Whether you want to control your sales activities on the go, report completed work orders, or make financial entries, abas offers various ways to access your system: Mobile Apps, browser access, and the native Windows interface. All applications and operating interfaces access a single database. Company data can be recorded using scanner, tablet or touch-terminal, and authorization processes are completed with signature capture.

Mobility
From purchasing to external service and sales teams, abas Mobile provides non-stop support around the world to increase your team’s flexibility. Scalable and portable, the Mobile Apps can run on numerous mobile platforms, including tablets and smartphones.

Customizing
Quickly implement your individual requirements with a comprehensive range of customization tools. The access and programming options are easy to learn and master. Fields and functions can be freely configured and expanded without hindering upgrades.

Low Hassle
We keep stress to minimum right from the start. Our reliable implementation strategy ensures shorter implementation periods, which lead to a quicker return on your investment. We also provide low-maintenance solutions for the operating system and interfaces.
The People of abas

From our most successful customers, we’ve learned that the knowledge of individual team members is an invaluable resource for the process effectiveness and competitiveness of any organization. That’s why we strive to find the brightest and most creative heads in the industry. But beyond industry and process expertise, what matters most to us are the individual personalities and diverse perspectives of our team members. It’s a philosophy reflected in our software, which can be tailored to roles, users, and situational requirements like no other solution today. No business can become a market leader without fully engaging their team. abas was founded on this simple principle, and it’s one of the main reasons why our founders and many of our earliest team members are still passionately part of the abas family.
Best operating costs

Analysts report that companies too often only compare implementation and maintenance fees while preparing for their ERP projects. This approach falls dangerously short as it neglects the biggest cost driver in ERP: Change. When evaluating ERP solutions, organizations should include the Total Cost of Change (TCC), which measures the cost of making changes to the ERP system to meet business needs in the longer term. When applying a holistic view of all costs, including the Total Cost of Change, abas ERP is unmatched. Our flexible technology and implementation method obviate maintenance for modifications and configuration to ensure all costs are transparent and can be calculated years in advance.

Effective Project Management

Introducing a new ERP system is an enormous challenge for any organization. The expertise of your implementation partner is just as important as the software you choose. The quality of their process consulting and the effectiveness of their project management will determine your success. Since 1999 we have ensured consistent quality around the globe with our proven Global Implementation Method (GIM).

Fluid Business Processes

Imagine the advantages if you could improve your business processes seamlessly during operation. With abas you can stop imagining and start attaining. No other ERP solution equally allows you to configure, automate and secure mission-critical systems and workflows.

“Abas USA is an organization that truly embraces change, which is crucial in today’s dynamic technology industry.”

Stevency

Dedicated tennis player. Financial consultant working with abas USA customers from the Sterling, Virginia office.
"We use abas ERP in the USA, Spain and Germany. Thanks to abas’s Global Implementation Method and the expertise of the abas partners, we were able to leverage our investment across borders to achieve quick results, standardize data, and consolidate reporting. We now have real-time transparency throughout the company—and around the globe."

Christian
Hobby photographer, Scuba diver, Managing Director of ABEL Pump Technology.

ABAS ERP PROJECT IMPLEMENTATION: 7 STEPS TO SUCCESS

Global Implementation Method (GIM): A proven strategy since 1999. Implementation period ~30% below the market average, faster return on investment
To ensure the highest level of security during the abas implementation and a quicker ROI, we have developed a proven implementation method based on our 35 years of project experience: abas GIM (Global Implementation Method).

abas GIM is a seven-step approach centered on the goals you want to achieve with ERP. It is designed to keep your project within budget and on time, while balancing available resources.

Even for international projects, you can be certain that this method will be used at all your locations. An overarching project organization manages the holistic aspect of the project and coordinates objectives, communication and procedures for multiple installations around the globe.

**YOUR ADVANTAGES:**
- Seamless and efficient implementation
- Shorter implementation period: ~30% below the market average
- Cost transparency and budget compliance
- Quicker return on investment (ROI)
They make engine and drivetrain systems for Formula 1, design and manufacture industrial vacuum solutions, provide premium cosmetic products to hotels around the world, or are trendsetters for modern living... But they all have one thing in common. They are all Hidden Champions. Each of these highly specialized, mid-market companies has run their business with heart and soul to become a market leader in their niche industry—many of them even internationally. At abas, we are privileged to have so many of these [global] market leaders among our customers and are proud to support and accompany them along their path to success—often over decades.

On the following pages we would like to introduce to you a small selection of the Hidden Champions that rely on abas.
Throughout the years since the ERP implementation, the system did not only convince through its stability, but also grew with the company. Pankl has a high demand for software flexibility. The significance of the ERP system also grew for the management in the past years because key figures play a major role for the company listed on the stock exchange. Pankl adopts the key figures of all companies of the group from the individual clients into a management information system (business intelligence) and evaluates them. For a uniform group controlling, abas provides many options through the group accounting module, financial accounting, fixed asset accounting or Corridor Controlling.

“We have very high requirements regarding the flexibility of the software as we have to cover very different business areas and processes, and because requirements often change—due to Pankl’s growth. Generally, for example in the racing industry, we have to be prepared for very short development-to-delivery turnarounds. This requires exact, yet flexible, planning. We also need to realize extremely short processing periods in production. abas ERP provides optimal support.”

Birgit Thek, Head of ERP Department
www.pankl.com
CGR GROUP

INTEGRATED PROCESSES FOR INTERNATIONAL SUCCESS

For more than 20 years, CGR Group has been a leader in the spiral spring market. With offices in 6 countries on 3 continents, CGR has 14 production sites and over 800 employees. And the company continues to grow with annual revenues exceeding €100 million. With their focus on production for the aeronautics and automotive industries and their increasing international requirements, CGR needed a unique business solution. The search was on for a new ERP system to integrate all their business processes, including administration, logistics, and their technical office. After a strict selection process that included all the major ERP vendors, abas ERP was chosen for its usability and its excellent support for automotive industry processes.

“We were looking for an international ERP system that supported the specific processes of the automotive industry, in particular EDI, labeling, automatic invoicing, and order management. We chose abas because of the exceptional industry expertise of the consultants in each country and the scope of the product itself, which is significantly greater than that of the other ERP solutions we evaluated.”

ADA GROUP

SAVINGS THROUGH SYSTEM FLEXIBILITY

After an unprecedented growth period, the ADA Group, a market leader for premium hotel cosmetics based in Germany, was in desperate need of a new business solution. Their previous, custom business software had reached its limit. Because of the ADA Group’s broad range of products, the new system would need to be able to support not just process manufacturing, but also job, batch and lot production. Furthermore, the system would need to support multiple clients as ADA distributes through various national and international locations. abas ERP fulfills these requirements. Since 2003, the ERP system has accompanied the hotel cosmetics specialists around the globe. With the evolutionary and flexible abas ERP solution, ADA now has a tool that easily connects new locations and optimally supports their continuous improvement process. Over the years, their expectations for the IT system have been more than met. ADA saves money and maps new processes in the software themselves. And the best part is that the system still remains fully upgradeable.

“We chose abas ERP because we were confident that we could perform upgrades and make modifications to the software ourselves. Thanks to the flexibility of the system, we have been able to map every defined change in the software. With other systems I have worked with during my professional career, upgrades took months. With abas, a new release is imported over a single weekend. That’s an enormous cost advantage, as significantly less IT capacity is required when compared with other systems.”

PROJECT HIGHLIGHTS
• International operation
• Central production client
• Upgrade compatibility
“The availability of abas in over 28 languages – in operation and as output languages – is as much of a plus for internationally operating companies as the processing of different currencies. The hardware plays a major role when we think of expansion: we also deliberately decided to go for a system, which would give us flexibility as we have already developed hardware structures which we would like to continue to use. Taking this into account, nothing stands in the way of a further expansion at SKF.”

Mario Brückner, employee in international sales, and responsible for the implementation and support of ERP software at SKF Economos

www.skf.com/seals
One of our central goals was—and still is—to minimize administrative processes within the company and between all international subsidiaries through modern organization strategies. Having abas ERP was a significant factor in achieving this goal, because it supports our organization rather than forcing us to conform our organization to inflexible IT systems the way many other software solutions do.”

Udo Böttcher, Head of IT
